

Start Here

- ✓ Read the letter from the scientist below
- ✓ Look through your backpack to find what's in there
- ✓ Decide who will do the roles. There are name badges in the front pocket of the backpack.
- ✓ Switch the roles at least once during your visit
- ✓ Read the directions at the top of each of your worksheets.
- ✓ The number and title of the worksheet activity match the number and title on the photo guide to help you find the exhibit you need.
- ✓ If the exhibit is busy, do another one. They do not have to be done in number order.

Hello Students,

Welcome to the Science Museum! We work for Minnesota's Department of Health and we study bacteria and other cells to learn about the spread of diseases. We answer questions like these every day: How far do bacteria travel when you sneeze? How do diseases spread from one person to another? Which microscopes should we use for this type of cell? Use math to answer these questions about cells and bacteria!

Good Luck,

Billie Juni and Joanne Bartkus
